in this work the uncertainty quantification uq approaches combined systematically to analyze and identify systems the generalized polynomial chaos gpc expansion is applied to reduce the computational effort the framework using gpc based on bayesian uq proposed in this work is capable of analyzing the system systematically and reducing the disagreement between the model predictions and the measurements of the real processes to fulfill user defined performance criteria

the range of components technology is both wide and diverse but some common understanding is emerging through the ideas of model based development these include the notions of interfaces contracts services connectors and architectures key issues in the application of the technology are becoming clearer including the consistent integration of different views of a component component composition component coordination and transformation for platforms however we still know little about theories that support analysis and synthesis of component based systems the distinct feature of this volume is its focus on mathematical models that identify the core concepts as first class modeling elements and its providing of techniques for integrating and relating them the volume contains eleven chapters by well established researchers writing from different perspectives each chapter gives explicit definitions of components in terms of a set of key aspects and addresses some of the problems of integration and analysis of various views component specification component composition component coordination refinement and substitution and techniques for solving problems the concepts and techniques are motivated and explained with the help of examples and case studies

scientific essay from the year 2012 in the subject speech science linguistics grade excellent with honor course critical discourse analysis language english abstract the present paper has shown the practical part of cda according to three scholars namely they are norman fairclough ruth wodak and teun van dijk their approaches are somehow different in method and way of interpretation while fairclough is brought up on the systemic functional model of theory and thus often concentrates on rather limited amounts of research material wodak turns to sociolinguistics and ethnography with an emphasis on corpus based research and on work with different approaches with a variety of empirical data as well as background information however the notion that language is inherently social remains a key assumption in both approaches on

the other hand similarly to fairclough van dijk acknowledges three different perspectives text discourse practice and sociocultural practice and emphasizes on the link between textual analysis and sociocultural analysis however van dijk differentiates himself from both fairclough and wodak in his understanding of social events or of social institutions and power relations to van dijk social cognitions mediate between micro and macro levels of society between discourse and action between the individual and the group therefore the focus on social cognition governs the process of analysis
